Signature:

1.WHAT OUR PROJECT IS?

Our project is a Travel and Tourism Management System, a web-based platform designed to allow users to browse, book, and manage travel-related services. The system includes features for user registration and login, browsing tour packages, booking tours, and an admin panel for managing listings. It aims to simplify the travel planning experience and bridge the gap between travel agencies and customers through an interactive digital interface.

2.WHY WE CHOOSE THIS TOPIC?

We selected this topic because the tourism industry is rapidly evolving with technology. Most people prefer online solutions for travel planning, so building this system allowed us to create a real-world solution using the skills we learned in this course. Additionally, it helped us understand full-stack development, database management, and web technologies in a practical context.

3.What language we have used

Frontend:

HTML, JavaScript

4.Team members and contributions

Raima: Splash screen, Login, Sign up, Forget password, Book package and Notepad

Nadira: Dashboard, Dashboard buttons: Add personal details, Update personal details, View details, Delete personal details, Check package and View package

Tasnim: Dashboard buttons: View hotels, Book hotel, View booked hotel, Destinations, Payments, Calculator and About
